## Committed Sprint Tasks:

Priority: 1
As the product owner, I would like ballots to be valid when the election is running, as invalid ballots would skew the election.
Acceptance Criteria: • Ballots included if ≥ half candidates ranked • Other ballots ignored • Determined at election time
Effort: M

| Priority: 2 |
| --- |
| As a user I want to only have to input the name of the csv file containing the ballots because entering all the other parameters manually is tedious when needed to be done repeatedly. |
| Acceptance Criteria:
• If user provides no command line argument, the terminal will prompt the user for the file name
• The program immediately starts running and provides results of the election if a filename is provided as an argument. |
| Effort: S |

Priority: 3
As an election official, I would like a shorter report than the audit, so I can quickly view the results of the election.
Acceptance Criteria: • Shows winners • Shows date, type of election • Shows number of seats and candidates
Effort: M

Priority: 4
As an election official, I would like the election progress to be displayed on the screen as it's being ran.
Acceptance Criteria: • Plurality shows tallies of each candidate as election progresses. • For droop, the screen shows update info for each pass
Effort: S
